                                                                                                                                                                                                                                                                                                                                                           GATTCGCGGGCACAGACGCCCAGGACCGCGTTCCCACGTGGCGGAGGGACTGGGGACCC 180
             This invention relates to a method for isolating phenotype switch molecules and phenotype-related gene batteries from complex genomes of higher animals and plants. The method is useful in gene localisation and classification analysis, studying gene development networks and function networks, and designing drugs based on regulatory sequences of the phenotypes for disease treatment. The present sequence represents DNA encoding a telomere reverse transcriptase (TERT), which is used in an example illustrating the use of the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCAGACCCCCGGGTCCGCCCGGAGCAGCTGCGCGGGGCCAGGCCGGGCTCCCAGTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a polynucleotide comprising an encoding sequence for a glycosyltransferase, under control of a heterologous tumour specific or tissue specific transcriptional control element, where expression of the polynucleotide in a human cell causes the cell to express a cell-surface carbohydrate determinant to which some or all mumans have a naturally occurring antibody. The polynucleotide of the invention is useful for killing cancer cells and for preparing a medicament for the treatment of cancer. The polynucleotide sequence of the invention can be used to treat disorders by gene therapy. This polynucleotide sequence represents the human TRRT (telomerase reverse transcriptase) promoter and upstream sequence related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The present invention relates to a new replication-conditional virus with a genome comprising adenovirus replication genes and one or more adenovirus feterologous gene (s) that functionally replaces one or more adenovirus gene (s) required for replication or assembly of the virus. The invention is useful for killing a cancer cell (such as lung, pancreatic cancer, medulloblastoma, cervical carcinoma, fibrosarcoma or osteosarcoma), killing a call expressing TERT (telomerase reverse transcriptase), and in preparing a medicament for treating cancer and a condition associated with increased expression of TERT in affected cells, in a subject. The invention is also useful for producing replication defective adenovirus vector which is useful for transfent expression of a second defective adenovirus vector which is useful for transfent expression of a second defective adenovirus vector which is useful for transfent expression of a second defective adenovirus vector which is useful for transfent expression of a second defective and on the condition are processed and the condition of a second defective and condition are processed and condition of a second defective and condition are processed and condition as a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       heterologous therapeutic gene to correct a congenital defect, introducing proinflammatory or antiinflammatory activity, enhancing telomerase function, and delivering heterologous effector genes that induce killing of the transduced cells. The invention is more safe for use in cancer therapy. The present nucleic acid sequence represents the human TERT sequence contained within a lambda clone sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel replication-conditional virus useful for cytolysis of target cells e.g. cancer cells and preparing a medicament for treating cancer, comprises heterologous replication element in an adenovirus-based

The invention relates to a system for depleting a cell population of undifferentiated stem cells, by introducing nucleic acids of structure P-X, where X is a nucleic acid encoding product that is lethal to a cell in which it is expressed; or renders a cell in which it is expressed to which it is expressed; or renders a cell in which it is expressed to an external agent, and P is a usceptible to the lethal effect of an external agent, and P is a transcriptional control element causing X to be preferentially expressed in the undifferentiated stem cells. The system is used for depleting a cell population (preferably, human embryonic stem cells) of undifferentiated stem cells. A population of differentiated cells is useful in regenerative medicine, and for preparing antibodies and cDNA libraries that are specific for a differentiated phenotype. The cell populations are also useful for drug screening and therapeutic applications. The differentiated cells are useful for tissue constitution or regeneration in a human patient in need of treatment. The cells are administered in a manner that permits to graft to the intended tissue side and reconstitute or regenerate the functionally deficient area. The neural progenitor cells are useful for treatment in the constitution or regenerate the sequence of the constitution or regenerat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         13327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13148 CCCTCGCTGGCGTCCCTGCACCCTGGGAGCGCGAGCGGCGCGCGGGGGGGAAGCGCGGCGGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360
Depleting a cell e.g., human embryonic stem cell population of undifferentiated stem cells (UC) for use in regenerative medicine comprises genetically altering UC in a population to express nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             or chronic damage to the nerve system e.g. epilepsy, stroke, ischaemia, Huntington's disease, Parkinson's disease, multiple sclerosis, leukodystrophies, neuritis, etc. The hepatocytes and hepatocyte precursors are useful for assessing animal models for ability to repair liver damage. The cardiomyocyte population is useful for assessing animal models for cryonipury, regenerating cardiac muscle and to treat insufficient cardiac function. This polynucleotide sequence represents the DNA of plasmid pGRN144 containing the human hTERT gene relating to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CCAGACCCCCGGGTCCGCCCGGAGCAGCTGCGCTGTCGGGGCCAGGCCGGGCTCCCAGTG 120

```
The present invention relates to a viral vector comprising first and second genes controlled by heterologous control elements, where the first gene is a preferentially expressed in cells expressing human telemerase reverse transcriptional control element for a tissue or tumour context than TERT, and where transduction of the vector into a mammalian cell expressing TERT causes the death of the control of a progeny. In particular, the second gene may be under the control of a transcriptional control element for a tissue specific gene selected from albumin, alpha-fetoprotein, prostate-specific antigen, mitochondrial creatine kinase, myelin basic protein, glial fibrillary acidic protein, and neuron-specific enolase. The second gene may be under the control of a transcriptional control element for a human telomerase RNA component (hTR). The vector of the invention is useful for killing a cancer cell, or treating a subject for a condition associated with increased expression of TERT in affected cells. The vector is also useful in the preparation of a medicament for treatment of a condition associated with concert, prostate cancer, muscle cancer, neural cancer, lung cancer, pancratic cancer, medulloblatoma, cervical carcinoma, fibrosarcoma, and osteocatic cancer, medulloblatoma, represents a lambda clone concert, and especially invertible cancer, medulloblatoma, represents a lambda clone concert, and cancer and concert, and cancer and concert, and concert, and cancer and concert, and cancer and concert, made cancer and cancer and concert, and cancer and cancer and cancer and concert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New dual specificity vectors driven by the telomerase promoter, useful for killing or slowing the growth of tumor cells, or for treating cancer, e.g. liver cancer, prostate cancer, lung cancer, or pancreatic cancer.
                                                                                                                                                                    Viral vector; heterologous control element; gene expression; human telomerase reverse transcriptese; hTERT; tumour specific gene; cell death; transcriptional control element; tumour secriptional control element; human telomerase RNA component; hTR; cancer cell; liver cancer; profetae cancer; meucle cancer; neural cell cancer; lung cancer; panareatic cancer; medulloblastoma; cervical carcinoma; fibrosarcoma; panareatic cancer; medulloblastoma; cervical carcinoma; fibrosarcoma; setessarcoma; lambda clone; lambdaGphis; human; de.

Schiff JM;

telomerase promoter and at least one viral El gene. Specifically, the El genes are ElA, IRES and ElB and the human telomerase promoter is preferably hrERT. The present invention describes a virue containing this polymucleotide and an anticancer agent that replicates efficiently in tumour cells and causing cell death. As such, it can be used for the treatment of cancer, in particular cancer of the stomach, large intentine, lung, liver, prostate, pancreas, digestive tract, bladder, mammary gland, uterue, thyroid gland and ovary. Accordingly, this composition exhibits cytostatic activity. This polymucleotide sequence is gene This invention relates to a novel polynucleotide comprising a human El; ElA; IRES; ElB; anticancer; Polynucleotide comprising a human telomerase promoter and an El Kawashima T; KANS-) KANSAI TECHNOLOGY LICENSING ORG CO LTD Human telomerase promoter (hTERT) DNA SegID 4. containing the product of the invention can be linked with DNA encoding an anti-tumour protein or reporter protein. The constructs are useful for identifying candidate substances that modulate the activity of the telomerase regulatory region. The constructs can be used in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Telomerase reverse transcriptase, TERT; cytostatic; apoptosis; cell growth inhibitor; antisense oligonucleotide; antisense technology;

The invention describes a compound, 8-50 nucleobases in length targeted to a nucleic acid molecule encoding human TERT (telomerase reverse transcriptase), where the compound specifically hybridises with and inhibits the expression of TERT. A series of oligonucleotides were compound to target different regions of the human TERT RNA. These were 20 nucleotides in length and composed of a central gap region consisting of the 12 deoxymucleotides, flanked on both sides (5' and 3' directions) by five-nucleotides. The compounds were composed of 2'-methoxyethyl (2'-MOE) nucleotides. The compound serve analysed for their effect on human CTERT mRNA levels by reverse transcriptase (RT)-polymerase chain reaction (PCR). The compound is useful for inhibiting the expression of TERT in cells or tissues, for treating a human having disease or condition associated with TERT, for modulating apoptosis, for inhibiting cell crowth (preferably, cancer cell growth), in antisense therapy and for diagnostics and therapeutics. This sequence encodes human telomerase reverse transcriptase (TERT) #1, and is used to create antisense coligonucleotides which modify TERT expression, described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New compound targeted to nucleic acid molecule encoding telomerase transcriptase (TERT), which specifically hybridizes with and inhibits expression of TERT, useful for modulating apoptosis and inhibiting cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 51552 BP; 10709 A; 13313 C; 15370 G; 12158 T; 0 U; 2 Other;

```
The invention relates to a recombinant adenovirus vector which overexpresses an adenovirus death protein (ADP) and which is replication-restricted to cells expressing telomerase, comprises a human telomerase reverse transcriptase promoter (hTERT) and at least one inactivating mutation in the E3 region. The vector of the invention is useful in vitro for promoting death of a cell expressing telomerase, and for promoting death of a cell expressing telomerase, and for promoting death of neoplastic cells in a patient. The adenovirus vector is an efficiant and effective anticancer agent that could specifically target neoplastic cells, while replicating poorly or not at all in normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel recombinant adenovirus vector useful for destroying neoplastic cells, comprises a human telomerase reverse transcriptase promoter and at least one inactivation mutation in the B3 region.
                                                                                                                                                                                                                                                                                        241 CCCCGGCCCCACCCCTCCGGGCCCTCCCTTTCCGCGGCCCCGCC 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to expressing gene product in a cell type-
preferential manner. The method involves providing a first expression
cassette having a cell type-preferential promoter, providing a second
expression cassette having an inducible promoter, and transferring the
first and second expression cassettes into a cell in which the cell type
specific preferential promoter is active. The methods and compositions
of the present invention are useful for treating cancers of the brain,
head and neck, esophagus, thyroid stomach, colon, liver, kidney,
prostate, breast, cervix, ovaries, testicles, rectum, skin and blood. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Expressing gene products in a cell type-preferential manner with a binary or bicistronic expression system, useful for treating cancers of the brain, head and neck, esophagus, thyroid, stomach, colon, liver,

                                                                                                                                                                                                                                                                                                                                                                            240
tissue, and efficiently spreading to neighbouring neoplastic cells, thereby maximising its cancer-killing ability. The presence of human telomerase reverse transcriptase promoter allows restriction of replication of the adenovirus to cells expressing telomerase without the need for complementation to achieve replication competence in these cells. The present sequence is adenovirus vector KD3-TERT which comprises an ADP gene, a hTERT promoter, and a mutation in the B1A region

coverexpresses an adenovirus death protein (ADP) and which is replication-
coverexpresses an adenovirus death protein (ADP) and which is replication-
crestricted to cells expressing telomerase, comprises a human telomerase
contexpresses promoter (hTRRT) and at least one inactivating
contexpresses promoter (hTRRT) and at least one inactivating
contexpresses region. The vector of the invention is useful in vitro
contexpressing telomerase, and for promoting
contexpressing telomerase, and for promoting
contexpressing telomerase, and for promoting
contexpressing telomerase and for promoting
contexpresser transcriptase promoter allows restriction of
contexpresser transcriptase promoter allows restriction of
contexpresser transcriptase promoter allowerase without the
contexpresser transcriptase promoter allowerase without the
contexpresser transcriptase promoter competence in these
colls the present sequence is adenovirus vector GZ3-TRRT which comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              34373

ABRC Stock Number CS845346; T-DNA left border flanking sequences of Syngenta Arabidopsis Insertion Library (SAIL) lines are available through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not single contiguous sequences.
Class: TDNA tagged.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT & vector. Library
was not normalized Library was constructed by Life Technologies, a
division of Invitrogen.
                                                                                                                                                                                                                                                                                                         BX427015 Homo sapiens FETAL LIVER Homo sapiens cDNA clone CSODM006XN18 3-PRIME, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          145

ABRC Stock Number CS812359; T-DNA left border flanking sequences of Syngenta Arabidopsis Insertion Library (SAIL) lines are available through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not class: TDNA tagged.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CL477397

ABRC Stock Number CS61263; T-DNA left border flanking sequences of ABRC Stock Number CS61263; T-DNA left border flanking sequences of Syngenta Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not single contiguous sequences.

ABRC Stock Number CS644896, T-DNA left border flanking sequences o

Syngenta Arabidopsis Insertion Library (SAIL) lines are available
through the Arabidopsis Biological Resource Center (ABRC).

Sequences represent a pool of amplified genomic regions and not

single contiguous sequences.

Class: TDNA tagged.
                                                                                                                                                                                                                                                  9

\* NOTE: This is a 'working draft' sequence. It currently
\* consists of 9 contigs. The true order of the pieces
\* is not known and their order in this sequence record is
\* arbitrary. Gaps between the contigs are represented as
\* runs of N, but the exact sizes of the gaps are unknown.
\* This record will be updated with the finished sequence
\* as soon as it is available and the accession number will AC114955 161252 bp DNA linear HTG 14-MAR-2002 Homo sapiens chromosome 5 clone RP11-117B23, WORKING DRAFT 24405 GCGCACGTGGGAAGCCCTGGCCCCGGCCACCCCGGG 24441 HTG; HTGS\_PHASE1; HTGS\_DRAFT; HTGS\_ACTIVEFIN. Homo sapiens (human)

RESULT 1 ABS98659

Virus, viral vector; adenoviral nucleic acid backbone; breast cancer; inverted terminal repeat; ITR; termination signal sequence; lung cancer; ESF responsive promoter; adenoviral packaging signal; prostate cancer; neoplastic condition; colon cancer; cytostatic; immunostimulant; gene therapy; human; TERT; promoter; ds. Recombinant viral vector comprising an adenoviral nucleic acid backbone, useful for treating neoplastic disorders such as lung, breast, prostate Ennist DL, Forry-Schaudies S, Gorziglia M, Hallenbeck PL, Hay CM; Jakubczak JL, Kaleko M, Ryan PC, Stewart DA, Xie Y, Connelly S; Police SR, Clarke L, Phipps S, Cheng C; Human TERT promoter sequence #2. 23-FEB-2001; 2001US-0270922P. 01-JUN-2001; 2001US-0295037P. 14-JAN-2002; 2002US-0348670P. 22-FEB-2002; 2002WO-US005300. (NOVS ) NOVARTIS PHARMA AG (first entry) WPI; 2002-706950/76. or colon cancer. WO200267861-A2. Homo sapiens. 17-DEC-2002 06-SEP-2002. ABS98659; 

The present invention relates to a new recombinant viral vector

comprising an adenoviral nucleic acid backbone, where the backbone comprises in sequential order, a left inverted terminal repeat (ITR), a termination signal sequence, an EZF responsive promoter which is operably linked to a gene essential for replication of the recombinant viral vector, an adenoviral packaging signal and a right ITR. The methods and compositions of the present invention are useful for treating a neoplastic condition such as lung, breast, prostets or colon cancer. The viral vectors are useful in studying methods of killing neoplastic cells in vitro or in animal models. The present nucleic acid sequence represents a human TERT promoter of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; telomerase reverse transcriptase; TERT; Site C; Progeria; burn; repressor binding site; Hutchinson-Gilford syndrome; AIDS; cancer; acquired immunodeficiency syndrome; cardiovascular disease; osteoporosis; skin rejuvenation; immune senseence; bone marrow transplant; skin graft; neoplastic disease; TERT minimal promoter; ds.

The present invention relates to a new method of modulating expression of telomerase reverse transcriptase (TERT) from a TERT expression system telomerase reverse transcriptase (TERT) from a TERT expression system controlled a TERT promoter and a Site C repression site. The method of the invention involves modulating TERT transcription repression by the Site C repressor binding site. The method of the invention is useful for modulating expression of TERT for production of reagents contibody. The method is also useful in a variety of different applications, including immortalisation of cells, production of reagents for use in life science research, therapeutic applications, and therapeutic applications, and cally an actual telomeric shortening and/or increasing TERT expression delays natural telomeric shortening and/or increases telomeric length and cells useful for treating disease conditions such as Progeria or Hutchinson-conditions such as Progeria or Hutchinson-conditions such as Progeria or Hutchinson-conditions and cannot be employed to lengthen telomeres of immune senseconce. The method can be employed to lengthen telomeres of osteoblast and osteoclast stem cells, encouraging bone replacement and proper remodeling and reinforcement, and cannet thus be useful to bone marrow transplants for the treatment of cancer and skin grafts for burn victims and as such the method improves the survival and effectiveness of bone carrival and effectiveness of bone carrival and effectiveness of contraining cellular proliferative disease conditions, including conditions e.g. cancer. The present nucleic acid inconting the number of invention is sequence of the
